Simplifying hemostasis.
The more simple and effective treatment options you have when treating gastrointestinal (GI) bleeds, the better your patient outcomes can be. Cook Medical provides those options with a wide variety of easy-to-use, efficient hemostasis devices.

Simple solutions to complex problems.
SPRAY

Hemospray®
Endoscopic Hemostat

- **Nonthermal**: The procedure causes no tissue changes, unlike some thermal modalities.
- **Atraumatic**: Since no force is applied at the treatment site, the powder minimizes the risk of tissue trauma that may result from other modalities.
- **Noncontact**: Aerosol delivery system eliminates the need for direct mechanical or contact forces with the treatment site by the delivery system.
- **Non-specific targeting**: Powder is sprayed toward the source of the bleed, so it does not require the en face approach and the precise targeting of other modalities.
- **Simplifying hemostasis**: Just activate the CO₂ cartridge, open the valve, and spray toward the source of bleeding.

MECHANICAL

Instinct Plus®
Endoscopic Clipping Device

- The 360° jaw rotation provides complete control for precise clip placement.
- The adjustable 16 mm wide opening span facilitates grasping the amount of tissue desired.
- The intuitive handle and clip design provide for simple one-step clip detachment.
- The clip opens and closes up to five times for optimal positioning.
- The clip has anchoring tips for secure tissue grasping.
- The clips are MR Conditional per ASTM F2503.

These images are used with the written permission of Dr. Shou Jiang Tang.
**DEVICES**

**MECHANICAL**

4, 6, 10 Shooter™
Saeed® Multi-Band Ligator

- This device has been market leader in ligation for over two decades.
- The Opti-Vu® Barrel with recessed bands and friction fit adaptor is designed to optimize your endoscopic view while maintaining suction and a secure fit on the endoscope.
- Universal-fit barrels streamline ordering and simplify inventory control.

**MECHANICAL**

ShortShot®
Saeed Hemorrhoidal Multi-Band Ligator with TriView® Anoscope

- This device is preloaded so that multiple hemorrhoidal ligations can be performed in a single procedure.
- The TriView anoscope with positioning slots helps to optimize the anatomical positioning of hemorrhoids.
- Only a single insertion of an anoscope is required, potentially decreasing patient discomfort and procedure time.

**INJECTION**

AcuJect®
Variable Injection Needle

- The needle advances and retracts smoothly.
- The clear outer catheter and white inner catheter allow visualization of needle advancement.
- The inner and outer catheters lock together to secure the advanced needle during injection.
- The needle length is adjustable.

These images are used with the written permission of Dr. Shou Jiang Tang.
DEVICES

INJECTION

AcuJect Flex®
Injection Needle

- Used for the endoscopic injection of legally marketed sclerotherapy agents and dyes into esophageal or colonic varices.
- The ergonomically designed handle has a thumb-actuated needle extension for one-handed operation.
- The AcuJect Flex offers reliable and stable needle extension.
- The flexible stainless steel coiled sheath provides functionality in tortuous anatomical positions while helping to prevent kinking.

THERMAL

Quicksilver®
BiPolar Probe

- The Hydromer® grafted tip and spiral electrodes are designed to minimize sticking in order to facilitate effective coagulation.
- The lumen allows for irrigation.
- The 350 cm long catheter has single and dual plug options for optimal scope and generator compatibility.
- The device is completely disposable, eliminating cleaning and reprocessing costs.

Hydromer is a registered trademark of Hydromer, Inc.
