

# Hercules®

3 STAGE BALLOON

## Features

- 1) Rapid deflation sleeve
- 2) Silver positioning indicator
- 3) Express evacuation catheter

- 4) Inflation hub
- 5) Size and inflation information catheter tag
- 6) 300 cm wire guide
- 7) Wire lock

## Step 1a

Fill the 60 mL inflation device with water. Purge excess air and water from the syringe by tilting the syringe assembly so that air bubbles float toward the Luer lock end, then pump the handle level until all excess air and water is purged from syringe and connected tubing and the level of remaining water is 40 mL.

## Step 1b

Maintain water level at the 40 mL line in the syringe as shown.

## Step 2

Securely attach the balloon inflation port to the inflation device.

## Step 3

Apply negative pressure.

Step 4

Remove the protective sheath from the balloon.

Step 5

Lubricate the balloon completely.  
**Do not** pre-inflate the balloon prior to introduction into the endoscope. After visualization of the silver positioning indicator, advance the balloon to the desired position.

Step 5.5 (Optional)

**(Wire guided balloon only)**  
To advance the wire guide in the wire guided version, move the blue wire lock to the "ON" position.

Step 6

Increase pressure to the specified pressure levels shown on the catheter tag.

Step 7

For deflation, apply negative pressure. Remove the balloon from the scope after the balloon is deflated.
